

Sanitreat

ODOUR CONTROL,
THE NATURAL WAY

Sanitreat is a powerful odour control agent that removes the offensive smell from putrefying organic waste. Developed by Excel Industries and brought to you by Excel's Environment & Biotech Division, Sanitreat is a completely natural formulation. It is an effective and proven method of sanitizing waste. Treated waste produces no smell and does not attract pests and other nuisances such as flies, vultures, rats etc.

Safe to use and easy to apply, Sanitreat is a simple, one stop answer to all your problems of smelly waste.

Naturally
Made

Sanitreat is a purely natural mix of herbs and minerals, no hazardous chemicals or man-made agents are used in its preparation. In appearance, it is a light brown, free flowing powder and gives off the soothing aroma of the earth.

It is non hazardous and non toxic and no special handling precautions are required to use it.

Easy application Fast effect

Simply spray dry Sanitreat over the waste using a powder spray (or manually, depending on the quantity of waste) and in just 15 to 20 minutes, Sanitreat renders the waste smell free.

Application amounts vary, depending on the organic content of the waste, climatic conditions, atmospheric humidity,

moisture content of waste and the age of the waste. Even then, 1 kg of Sanitreat is sufficient to cover 1 ton or 1 square meter area of waste.*

*This dose is indicative of average rates, but trials are recommended.

Environment & Biotech Division

Excel Environment & Biotech Division is a part of Excel Industries. We are dedicated to the cause of helping society manage its challenges of waste. Our products such as Excel's OWC (Decentralized Waste Management System), Bioneer (Our in-vessel composting system), Bioculum and Sanitreat are the products of years of dedicated research and development and are on their way to making a change.

And the journey has just begun, we are committed to innovation that builds a cleaner and greener India and continue to evolve and develop newer products and technologies that help make our prosperity more sustainable.

Power Packed Action

Sanitreat controls the putrefaction process that affects organic waste materials. In the normal course, this putrefaction produces toxic liquids, gases and leachates that produce an offensive odour, breed pathogens and attract pests. Sanitreat controls this process, eliminates smell and suppresses the production of toxic elements.

Sanitreat has proven its effectiveness in the toughest of situations including disaster areas, municipal dumps, railway stations, housing societies and many more.
